

Usability Testing Report for Community Olympic Festivals Platform

Date: 27/11/2024
Facilitator: Anne Maina

Overview of Findings

After testing the wireframe prototype with five different users, we gathered valuable insights into user experience and identified areas for improvement.

Key Learnings:

- Navigation Clarity:
 - Users found some navigation elements confusing, particularly when moving between creating an event and reviewing details. 
- Input Fields:
 - Several participants expressed uncertainty about required fields versus optional fields during event creation. 
- Social Media Integration:
 - Users were unclear on how to share events on social media; they suggested clearer prompts or buttons. 
- Visual Design:
 - Feedback indicated that while the layout was generally appealing, some users felt that certain sections were too cluttered. 
- Error Handling:
 - Participants noted that error messages were not clear when they tried to submit incomplete information. 

Participants:

- Participant 1: Ray
- Participant 2: Teddy
- Participant 3: Rodgers
- Participant 4: Anto
- Participant 5: Jesse
- .

List of 5 Main Iterations for Next Version:

- Improve Navigation Flow:
 - Simplify the transition between sections (e.g., from event creation to review) by adding breadcrumb navigation or clearer back buttons.
- Clarify Input Fields:
 - Clearly differentiate between required and optional fields with visual cues (e.g., asterisks or color coding).
- Enhance Social Media Sharing Options:
 - Add prominent sharing buttons with tooltips explaining their function to make social media integration more intuitive.
- Refine Visual Design:
 - Reduce clutter by consolidating similar information into collapsible sections or tabs to improve readability.
- Strengthen Error Messages:
 - Revise error messages to provide specific guidance on what needs to be corrected before submission.
